Art Unit: 1623

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 7 in part and claims 8-13, drawn to a solvate of olanzapine, classified in class 514, subclass 220, and class 540, subclass 557 for example.
- II. Claim 7 in part and claims 14-19, drawn to a solvate of cortisone, classified in class 424, subclass 115..
- III. Claim 7 in part and claims 20-25, drawn to a solvate of naproxen, classified in class 562, subclass 466, and class 514, subclass 428 for example.
- IV. Claim 7 in part and claims 26, drawn to a solvate of celecoxib trihydrate, classified in class 514, subclass 406 and class 548 and subclass 356 for example.
- V. Claim 7 in part and claims 27-31, drawn to a solvate of celecoxib, classified in class 514, subclass 406 and class 424 subclass 484 for example.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and V are unrelated to each other. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions are separate and distinct from each other since the pharmaceuticals in each Group above are involved in various, many possible and

Art Unit: 1623

different and separate and chemical structure, function and use. Therefore, they have different modes of operation and different functions.

Each compound claimed herein have distinct structural features and art recognized use in divergent pharmaceutical fields. As such, the search for each distinct compound will place an undue burden on the examiner.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art due to their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Claim 7 link(s) inventions I-V. The restriction requirement between the linked inventions is **subject to** the nonallowance of the linking claim(s), claim 7. Upon the indication of allowability of the linking claim(s), the restriction requirement as to the linked inventions **shall** be withdrawn and any claim(s) depending from or otherwise requiring all the limitations of the allowable linking claim(s) will be rejoined and fully examined for patentability in accordance with 37 CFR 1.104 **Claims that require all the limitations of an allowable linking claim** will be entered as a matter of right if the amendment is presented prior to final rejection or allowance, whichever is earlier. Amendments submitted after final rejection are governed by 37 CFR 1.116; amendments submitted after allowance are governed by 37 CFR 1.312.

Applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, the allowable linking claim,

Art Unit: 1623

such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Restriction for examination purposes as indicated is proper because all these inventions listed in this action are independent or distinct for the reasons given above and there would be a serious search and examination burden if restriction were not required because one or more of the following reasons apply:

- (a) the inventions have acquired a separate status in the art in view of their different classification;
- (b) the inventions have acquired a separate status in the art due to their recognized divergent subject matter;
- (c) the inventions require a different field of search (for example, searching different classes/subclasses or electronic resources, or employing different search queries);
- (d) the prior art applicable to one invention would not likely be applicable to another invention;
- (e) the inventions are likely to raise different non-prior art issues under 35 U.S.C. 101 and/or 35 U.S.C. 112, first paragraph.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a invention to be examined even though the requirement

Art Unit: 1623

may be traversed (37 CFR 1.143) **and (ii) identification of the claims encompassing the elected invention.**

The election of an invention may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected invention.

If claims are added after the election, applicant must indicate which of these claims are readable upon the elected invention.

Should applicant traverse on the ground that the inventions are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Because the above set forth restriction/election requirement is complex, a telephone call to applicant's agent to request an oral election was not made. See MPEP § 812.01.
